MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Dutchess County, New York
Survey Area Data: Version 14, Oct 8, 2017

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Oct 7, 2013—Feb 26, 2017

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Site Description

This site received municipal, commercial and industrial wastes including wastes from a local dye works. The site has four feet of soil and vegetative cover over a plastic liner. Groundwater discharges to the Hudson River. A Phase I Investigation has been completed. A Phase II Investigation, completed in March of 1991, found no evidence of hazardous waste disposal. Analysis of surface water samples collected from the adjacent Hudson River, revealed no contamination attributable to the former land-

fill. The site is currently used as a public park and is located just north of the Beacon Metro Train station. The site will be referred to the Division of Solid Waste for their continued oversight.

Site Environmental Assessment

There is no evidence of leachate at the site. There is no evidence of surface water contamination attributable to the landfill. No environmental problems exist that can be associated with the disposal of hazardous waste. The site does not qualify for addition to the Registry of Inactive Hazardous Waste Disposal Sites

Site Environmental Assessment

See V00293. The actual site of the MGP has been redeveloped, and no trace of the original plant or surrounding soils remains. A neighboring property across the street (Dorel Hat) was found to have been impacted by tar which had migrated from the MGP site, and was remediated under V00293.

Site Owner(s) and Operator(s)

Site Description

Site Location: The CHIGE Beacon MGP Dorel Hat property is located in a suburban area in the City of Beacon, Dutchess County, N.Y. The site is approximately 4 acres in size, and is bounded by West Main St. to the north, River St. to the east, an open field owned by the Metropolitan Transportation Authority to the south and by Railroad Drive and the Beacon Railroad station to the west. **Site**

Features: The main site features include: an approximately 32,000 square foot building surrounded by a grass covered area in the southern portion of the property and an asphalt paved parking lot in the northern half. **Current Zoning/Uses:** The site is currently used for storage and office space and is zoned commercial. The surrounding parcels are commercial and residential. The nearest residential area is comprised of townhouses located approximately 100 feet to the east on River St. **Past Uses of the Site:** The 1 Main Street site is adjacent to a former manufactured gas plant (MGP). The MGP, located on River Street, operated from 1871 to approximately 1946. **Operable Units (OU)** The site was divided into 2 Operable Units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination

Operable Unit 1 (OU1) consists of the MGP site itself, which has since been redeveloped for residential use. It appears that all contaminated soils were removed prior to redevelopment. No significant amounts of MGP contamination were found to remain at the former MGP site, and it was determined that no further action was required. A release letter for the Beacon MGP was issued under the VCA on January 31, 2002. Operable Unit 2 (OU2) consists of the property across the street from the MGP, known as the Dorel Hat property. The majority of MGP contaminated soil was removed during an IRM conducted in 2007. On September 12, 2007 the Dorel Hat property was transferred to the Metropolitan Transportation Authority. On July 15, 2011 the Metropolitan Transportation Authority filed a Deed Restriction by which it is required to comply with the Department approved Site Management Plan. Site Geology/Hydrogeology: The site is underlain by unconsolidated sand and silt deposits to a depth of approximately 8 feet. Below these, a 4 foot thick clay layer lies above the slate bedrock. Groundwater on the site flows toward the Hudson River, to the west.

Contaminants of Concern (Including Materials Disposed)

Contaminant Name/Type

other

coal tar

Site Environmental Assessment

The primary contaminant is coal tar which contains PAHs and BTEX compounds. The majority of coal tar contaminated soil was removed during an IRM conducted in 2007. Due to the presence of the Dorel Hat building, a force sewer Main and a gas line on the site, some of the coal tar contaminated soil was not removed and remains in the subsurface under the building and to the east of the building. The coal tar is located at a depth of approximately 5 to 10 feet below the ground surface. Beneath the building, sub-slab soil vapor exceeds guidance values for indoor air. A sub-slab depressurization vapor mitigation system prevents sub-slab vapor from entering the building. Groundwater on the site exceeds Groundwater Quality Standards for VOCs, SVOC's, Metals and Pesticides. The area is supplied by a public water supply.

Site Health Assessment

Measures are in place to control the potential for coming in contact with sub-surface soil and groundwater contamination remaining at the site. People are not drinking the contaminated groundwater because the site is served by a public water supply that is not affected by this contamination. Volatile organic compounds in groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings is referred to as soil vapor intrusion. A sub slab depressurization system (systems that ventilate/remove the air beneath the building) has been installed in the on-site building to prevent the

indoor air quality from being affected by the contamination in soil vapor beneath the building.
Sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Notes:

- The proposed Office use is allowed by Special Use Permit issued by the City Council.
- The siting of the proposed building on the newly created parcel fills a void in the continuous street frontage common along both sides of this block; and reinforces the historical nature of the original city plan along this length of North Avenue. The building screens the existing parking lot towards the rear of the property.
- The proposed and existing lots, after subdivision, will comply with bulk requirements for the R1-7.5 Zoning District, thereby making simpler a potential future conversion to residential use in either or both buildings.
- The proposed building complies with Zoning for setbacks and height.
- Office hours are 7:00am to 10:00 pm, Monday through Sunday, inclusive.
- The existing business identification sign is proposed to be relocated between the new and existing buildings, and visible from both directions from North Avenue.
